

BJT → Bipolar Junction Transistor

Junction transistors or simply ~~at~~ Bipolar transistor (BJT) is a semiconductor device having two junction & three terminals. It is obtained by growing a thin layer of one type of semiconductor in between two thick layers of other similar type of semiconductors.

Types of junction Transistors

- (1) N-P-N Transistor
- (2) P-N-P Transistor

BJT \rightarrow Bipolar Junction Transistor

Junction transistor or simply bipolar transistor (BJT) is a semiconductor device having two junction & three terminals. It is obtained by growing a thin layer of one type of semiconductor in between two thick layers of other similar type of Semiconductors.

Types of junction Transistors

- (1) N-P-N Transistor
- (2) P-N-P Transistor
