

Ques - write short notes on imbibition.

"Soaking up of water by the dry substances is known as imbibition."

- This process actually takes place due to hydrophilic Colloid.

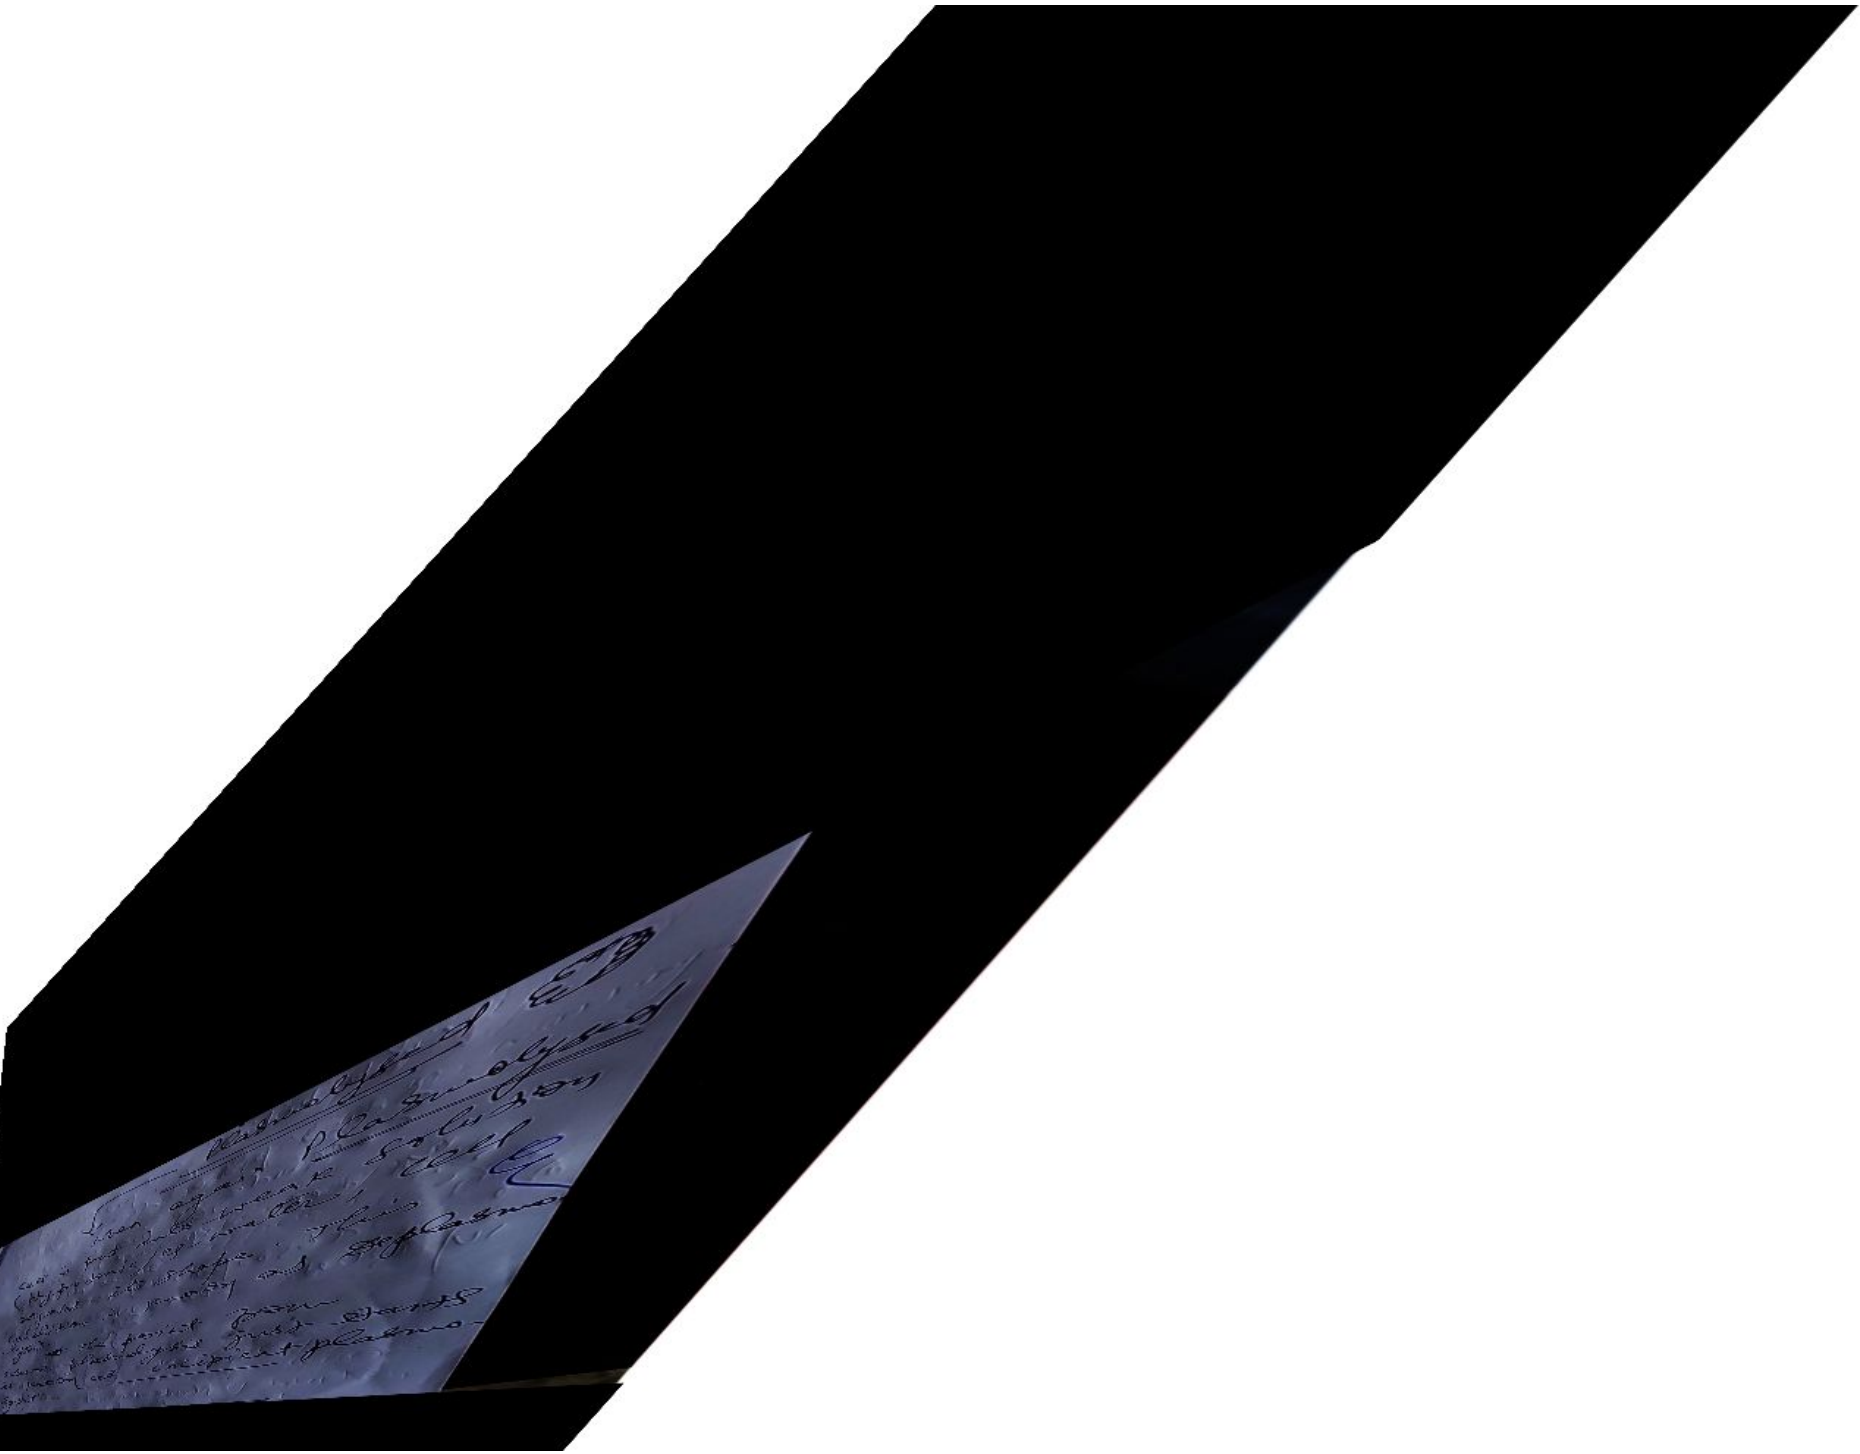

This process was 1st of all explained by Sachs (सैक्स) it is 1st step in absorption of water

14) Ques - short notes on diffusion

Movement of molecules from higher concentration to lower concentration directly is known as diffusion.

In this process SPM (semipermeable membrane) is not present. due to this process

I have analyzed
 your agar, plasma and
 cultures. It is a
 very good culture, and
 I believe it is
 a very good culture. This
 is a very good culture and
 I believe it is a very
 good culture. I believe it
 is a very good culture and
 I believe it is a very good
 culture. I believe it is a
 very good culture and I
 believe it is a very good
 culture. I believe it is a
 very good culture and I
 believe it is a very good
 culture.

Plasmolysed 

When again plasmolysed cell is put into weak solution (Hypotonic) e.g. water, cell regains its shape. This condition is known as deplasmolysis.

At the point from where plasmolysis just starts is known as incipient plasmolysis.
