

Linux

The linux is a type of operating system and it is built upon the linux kernel.

The linux kernel is like the brain of the operating system because it manages how the computer interacts with its hardware and resources. It makes sure everything works smoothly and efficiently. But the linux kernel alone is not enough to make complete operating system.

The linux kernel is combined with a collection of software packages and utilities which are together called linux distribution. These distribution make the linux operating system ready for users to run their application and

perform tasks on their computers securely and effectively. That is linux is a free and open source family of operating system that is ~~excellent~~ resilient and flexible. In 1991 individual by the name as linux torvalds constructed it.

Since the beginning linux has grow into a dependable and safe OS (operating system). That is used in an array of gadgets including PCs, cell phones and huge super-computers. It is well known for being costing-effective, which implies that impling it does not cost a lot. and efficient, which indicates it can complete a lot of job quickly. ✓
